Work Experience

May 2018 – Present

Software engineer Freelance

Software developer and technical lead in telecommunications and industrial IoT projects. Responsible for software architectures, technical specifications and implementation oversight for critical systems in the electrification and industrial sector.

- **Mobile Development:** Architecture and implementation of low-level iOS and Android apps for BLE/BLE mesh/NFC/USB communications (Swift, Java/Kotlin, Xamarin).
- **Embedded Systems:** Design and implementation of STM32-BLE systems with Silicon Labs BGM123 for external communications; expertise in C, SimplicityStudio, GATT protocol.
- **Desktop:** Development of .NET WinForms configuration software for serial interfacing with embedded systems. Implementation of real-time data processing and automatic compliance verification.
- **Cloud & IoT:** Management of AWS Lambda and IoT Core infrastructure for IoT projects, including secure tunneling systems.

October 2025 - November 2026

University tutor University of Bergamo

Group tutoring (12 hours) in Design, Algorithms and Computability (PAC), focused on modern software development practices:

- Version control: Git/GitHub and collaborative workflows
- Backend: Spring Boot, REST APIs, logging and diagnostics
- Frontend: Java UI, MVC pattern, Android development
- DevOps: Containerization with Docker

Education and Training

Studies

2018 – 2021

Master's degree in Computer Engineering University of Bergamo

Master's degree in Computer Engineering – LM-32

Grade: 110/110 cum laude

Multidisciplinary curriculum focused on embedded systems, electronics, automatic control and robotics, with specialization in AI, data analysis and cybersecurity.

2015 – 2018

Bachelor's degree in Computer Engineering University of Bergamo

Bachelor's degree in Computer Engineering – L8, Industrial Computing track.

Grade: 103/110

Industrial Computing curriculum: solid foundation in mathematics, physics and chemistry with specialization in automation, electronics, telecommunications networks and software engineering.

2010 – 2015

Electronics Technician Diploma ISISS Valle Seriana

Grade: 100/100

Five years of study allowed me to acquire technical knowledge in theoretical electronics and control. I gained practical experience in designing and building electronic circuits using laboratory instruments (multimeters, power supplies, oscilloscopes, function generators). In the final years, I acquired knowledge of Arduino platforms and open-source robotics systems.

Michele Piffari

Freelance software engineer

About me

I completed my Master's degree in Computer Science (LM-32) in March 2021 at the **University of Bergamo** and am continuing my work as a *freelance software engineer*. This dual path of study and work, which overlapped for 3 years, has given me not only professional training but also the awareness that what I am doing is something that genuinely interests me and that I want to pursue with greater determination. In my free time, I enjoy outdoor activities and exploring the mountain areas that surround me daily, both hiking and cycling.

Code skills

- Swift
- Java/Kotlin/Xamarin
- C#
- Python
- C/C++

Technology skills

BLE · NFC · Open CV · Azure devops · Modbus · GitHub · XML/JSON · AWS lambda · AWS IoT Core

Summer School

August 2019 — **Introduction to RL** — SDU - Denmark
Intensive 2-week course on *Introduction to reinforcement learning for robotics* at *Southern Denmark University* - SDU

Training

November 2020 - March 2021 — **HC-Lab3** — University of Bergamo
Training program within the Contamination Lab at the University of Bergamo aimed at promoting a culture of innovation and entrepreneurship in the context of *Aging Population* and *Silver Economy*.
This 6-month course allowed me to engage with different perspectives and diverse academic backgrounds; it also provided exposure to common entrepreneurship tools such as *Business Model Canvas* and *A/B Testing*.

Projects

2020-2021 — **Techniques for monitoring respiration using artificial neural networks during mechanical ventilation** — University of Bergamo
Analysis and research on the use of CNNs as support for the control cycle of the MVM pulmonary ventilator in an adaptive ventilation context.

2018 — **Commissioning and analysis of the control system of an industrial robot manipulator** — University of Bergamo
Analysis and research on the operation and movement control of an ABB anthropomorphic manipulator (ABB IRB 120) using proprietary software (RobotStudio).

2015 — **InMoov** — ISISS Valle Seriana
InMoov open-source robotics project developed as a capstone project for the oral final examination.

Awards

2011–2015 — **Io e Lode** — Confindustria Bergamo
Participation for four consecutive years in the "Io e Lode" project by Confindustria Bergamo.

April 2015 — **Alfieri del Lavoro** — Milan
Alfieri del Lavoro Conference: "Restart from knowledge to restart the country" – Montanelli hall, Corriere della Sera headquarters – April 11, 2015.

2014 — **Best school average** — ISISS Valle Seriana
Highest grade average of the institute in academic year 2013/14.

2014 — **National electronics competition** — Brescia
Participation in the National Electronics Competition.

February 3, 2026 — **Michele Piffari**
